Subject: How to do minor gridlines?

I'd like to do major AND minor gridlines in a x-y plot. However, setting XTICKLEN = 1.0 increases only the length of major tickmarks while the minor tickmarks remain unchanged. Strangely enough, setting XTICKLEN to a negative number changes the length of both, minor and major tickmarks, but of course doesn't produce the grid I want to see.

Any ideas?

Frank
