Hi,

I hate using forloops; does anyone know a better way of implementing the following code without forloops?

Thanks in advance

```
for column = 0, size1(1) -1 do begin  
  for row = 0, size1(2) -1 do begin ;  
    print, '-----'  
    print, b  
    end  
  end
```
