<DIV>Thanks for the tip so far, but now I got a problem with creating the header. Is there a dialog for selecting the projection parameters, e.g. 'Gauss Kruger Zone 2', or do I have to write a dialog on my own? In ENVI's menu irregular points to grid is such a dialog present.
Any ideas?
Joerg

array to an ENVI-image-file *.img. But somehow I can't find the right
function.
 </BLOCKQUOTE>

<P>
you have to write the file with the well known IDL function
(openW, writeU, close) for file writing.
after the writing you have to create the ENVI header file .hdr using the function
ENVI_SETUP_HEAD. this function has a lot of keyword describing the file dimensions (in pixels), the data type, etc. Refer to the ENVI help for the keyword to use. It is quite documented.

<P>Best regards. <PRE>>--
