;;; How about "yanking" this example into your IDL terminal?
;;; contour, data, /over is the key!

; Regular contour plot.
data = dist(40)
levels = [2,4,6,8,10,12,14,16,18]
contour, data, levels=levels, /follow, /xs, /ys

; Additional emphasis added to contour level=20.
contour, data, levels=20, /over, thick=3, /follow
