Subject: Phase Unwrapping algorithm in IDL Posted by Richard Tyc on Thu, 22 Jun 2000 07:00:00 GMT

Would anyone have a 2D phase image unwrapping algorithm they would be willing to share? (an algorithm which corrects for phase spillover on images which may only contain data between 0 and 2PI but in fact the data has a larger range which gets wrapped into the 0 -> 2PI range)

If not in IDL, one in C or Fortran would also help.

Thanks in Advance

Richard Tyc
