Ah!

I think I get it. Anonymous means anonymous... but it is still unique (until redefined).

```
S1 = {a:0, b:.1, c:"}
```

```
A = Replicate(S1,3)
```

```
S2 = S1
```

```
S2.c = 'bob'
```

```
A[1] = S2
```

```
IDL> help, s1,s2,/str
```

```
** Structure <37d658>, 3 tags, length=16, refs=3:
```

A	INT	0
B	FLOAT	0.100000
C	STRING	"

```
** Structure <37d658>, 3 tags, length=16, refs=3:
```

A	INT	0
B	FLOAT	0.100000
C	STRING	'bob'

```
IDL> S1 = {X:1, Y:'y'}
```

```
IDL> help, s1,str
```

```
** Structure <37fda8>, 2 tags, length=12, refs=1:
```

X	INT	1
Y	STRING	'y'

Thanks,

Ben
