Be very careful with the MS Fortran Unformatted Write.

MS Fortran writes data with control blocks and this control blocks are not the same of other Fortran (Sun Fortran for example) or Pv Wave.

I had difficulties reading with Pv Wave data written by MS Fortran Unformatted Writes . The only solution I had was to carefully look in the MS manual how this Fortran writes data and control blocks and then with Pv Wave make a byte per byte read of the data to discard the control blocks and to retrieve my data.
