Hi,

I am sure I have seen this ? before, but I can not find it after searching the resources. I apologize for repeating the ? again, but how do we multiply a 2D array by a vector?

In more detail, if I have $A = \text{FLTARR}(5, 3)$ and $B = \text{FLTARR}(3)$, then how do I multiply each of 5 columns in A by B without a loop?

Thank you,

Pavel
