Subject: Q(2): drawing continent

I have two questions related to continental outlines:

1) Can the continents be filled-in with a color or pattern? How?

2) I want to contour an oceanic quantity around the continents. I'm aware of
/overplot, but I get false effects near the continental boundaries since there
is a "filler" value on the land locations. Is there a way to tell contour to ignore
the unwanted (land) points?

Thanks in advance for any pointers on this.

-Steve
