Subject: assignment inside boolean expression
Posted by Patrick Broos on Mon, 10 Jul 2000 07:00:00 GMT

I was wondering if it's common knowlege that one can put an IDL assignment inside
a boolean expression (like in the C language). For example

if (v = 0) then ...   assigns v and does not execute the "then" statement, while
if (v = 1) then ...   assigns v and does execute the then.

Just as in C I find this leads to really nasty bugs.
