
Subject: why is $1/8 = 0$?

I am just wondering- I just found out after trying to debug the program for three hours that: $1/8$ gives 0 in IDL unless you say: $1/8.0$

Is it such a well-known fact?

By the way- I figured out the size command- DUH= could it be

: size() Damn, that was dumb

Thanks for your help,

Victor
