>

Hello,

These probably wouldn't (shouldn't) belong in the top ten... but I
suspect that any VP of Software Engineering would like to know about all
of the suggestions that didn't make the top-ten.

 (1) Since there are about as many NoXXXX as there are No_XXXX keywords
for the built in routines, how about
        making it possible to use either one form or the other.   That
is so that No_Edit = NoEdit

 (2) Do the same thing for Gray and Grey.

Thanks,

Ben
