Hi,

Has any body out there tried to link Oracle Pro*FORTRAN images with IDL in a VMS environment?

I want to write a Pro*FORTRAN routine that extracts data from the Oracle

Database under the

Control of IDL. I can do it by extracting data to ASCII files but I am looking for something better.

If I can work out how to create shareable images from the Oracle Link procedures, I should be able to hook back to IDL with CALL_EXTERNAL.

Thanks

George
