My suggests:
 -emacs like bindings in idlhelp (ctrl-a ctrl-k ...)
 -multi window support: when you create many windows whith differents axis / map_set, IDL forgot the system projection so you have to save by hand all !X !Y, !MAP, !MOUSE...etc. It should be nice if IDL manage it internaly.
 -same remarks for !P.multi. You can't go back a previous plot without losing axis.
