
Subject: Setting DEFAULT_BUTTON in modal dialogs

Hi,

I'm having some trouble setting the DEFAULT_BUTTON in a modal dialog.

It appears that no matter what id I set the default to be, the default is the first button created in the dialog (unless I set the DEFAULT_BUTTON before realizing the base, then it is the button with the shortest name!).

Has anyone managed to get this to work on a UNIX platform?
I've tried it with versions 5.1, 5.2 and 5.3 running on IRIX, Solaris and Linux - all display the same symptom.
