Subject: CURSOR and draw widgets
Posted by David Bowman on Thu, 20 Jul 2000 07:00:00 GMT

Greetings all,
   Is there any simple way to get the cursor position from a draw
widget in DATA coordinates? For some reason that I don't comprehend,
one is not supposed to use the CURSOR routine with widgets, however
button and tracking events only give device coordinates.

thanks in advance,
david
