Hi:

I'm evaluating Visual Numerics' PV-Wave software versus MathCad's Axum 6.0 (with S-PLUS) software for numerical analysis and data visualization capabilities. I understand that they are different levels of software. However, my needs are going to be variable too. I already have Axum 6.0 and can possibly get S-PLUS (which makes Axum more powerful).

Can anyone give me some details on how they differ in their numerical capabilities as well as web integration? If these newsgroups are not the right forums, any ideas where I can look for such comparison?

--

Thanks

Rajeev
