---

I would like to be able to create a 3-D scatter plot with 3-D symbols. It would be nice if I could define a cube with USERSYM. I can almost get what I want using PLOTS but the symbols are "flat" in 3-D.

Can I get this functionality using the polygon rendering routines? I am particularly worried about speed since the plot will be animated (continuously updated as symbol values change).

Thanks.

Kyle
