how much David loves *nix, I'm sure it will get top billing ;-)

I've decided to bite the bullet and install some flavor

of LINUX on an old portable I have around here that has

no hope of running Windows 2000.

Any suggestions for the neophyte LINUX installer?</blockquote>

hi David.

Become superuser and execute the installation program.

thas a GUI. Select the installation directory

cthe default is /usr/local/rsi), select the packages you need and

..... install.

Set the environment variable LM_LICENSE_FILE to the license file, execute
the configuration script

(idl_setup or idl_setup.ksh, it depends on what is your shell, in /usr/local/rsi/idl/bin
) - you can put it in your .cshrc/.bashrc/....etc file.

Type idl/idlde/envi/idlhelp/etc.... and it is like IDL for WIN.

br>Bye.
