
Subject: calling a function in herself

Hy to all!

I have a file with the main-procedure and some functions in it. When I'm in the function e.g h_wahl I want to call the function h_wahl again. Is that possible? When I compile the file, the expression h_wahl is not known in h_wahl.

e.g.

:procedure rasterung.pro

Function H_Wahl(a,b,Steig=steig,Abstand=abstand)

If Keyword_Set(abstand) Then

If Keyword_Set(steig) Then Begin

...

return, H_Wahl(c,d,/abstand)

Endif

End

pro rasterung...

Any suggestions?

Thanks in advance,
