
Subject: calling a function in herself

Hy to all!

I have a file with the main-procedure and some functions in it. When I'm in the function e.g h_wahl I want to call the function h_wahl again. Is that possible? When I compile the file, the expression h_wahl is not known in h_wahl.

e.g.

```
;procedure rasterung.pro
```

```
Function H_Wahl(a,b,Steig=steig,Abstand=abstand)
```

```
  If Keyword_Set(abstand) Then .....
```

```
    If Keyword_Set(steig) Then Begin
```

```
      ...
```

```
      return, H_Wahl(c,d,/abstand)
```

```
    Endif
```

```
End
```

```
pro rasterung...
```

Any suggestions?

Thanks in advance,
