
Subject: How can I keep from resizing widgets in IDL?

IDL has this annoying habit of rearranging all of the children widgets when a parent widget is resized -- this is rarely what we want to do and often this results in buttons disappearing because they become "hidden" under other widgets.

Is there a way to prevent this behaviour? If not, how can I decrease the size of the border bars to 0 so that a user cannot resize the corresponding widget?

Thanks in advance!
