While admiring the programming knowledge that Liam demonstrates here, I am afraid that I am noticing some lack of political wisdom. All those beer offers will vanish in a blink of an eye if you keep admitting to bugs every day! Why not follow the wise RSI path: don't tell 'em the bugs are fixed. Keep silent. Then, all of a sudden release V. 2.beta! Besides the amazement, a lot of maintenance beers may be collected in the meantime from those whos axis range endpoints were not defined correctly:-)

Cheers, Pavel
