Humm. I installed Windows 2000 on one of my machines, but then I didn't have any room for software. :-(

Does the program resize the windows properly? If so, you might try changing the XSIZE and YSIZE keywords in the Draw widget creation command to DRAW_XSIZE and DRAW_YSIZE. That was a hack that sometimes worked in the old days.

Cheers,

David

P.S. Let's just say I'm having a go with Linux today. :-)
