Subject: Simple number formatting problem
Posted by Simon de Vet on Wed, 02 Aug 2000 07:00:00 GMT

Trivial problem, no doubt, but I've never been able to get my brane around formatting options.

I have a list of files, with the extension .01, .02, .03 ... .12. The preceding portion is indentical in all cases.

I'd like to be able to load these in a loop, but I first need to convert the counter value into this format.

My current, and very ugly, technique is to have an array filled with ['01', '02', ... '12'], and then reference the appropriate entry. It works, but I don't like it.

Any ideas?

Simon
