Hello everybody,

Could you tell me how does IDL determine what command to call when you double-click on a .sav file? For instance, when I double-click the file post_proc.pp (which is an IDL .sav file), the following pops up in the log window:

```
IDL> restore, 'IDE data:idl:hc:post_proc.pp' & post_proc.pp
restore, 'IDE data:idl:hc:post_proc.pp' & post_proc.pp
      ^
```

% Syntax error.

Why is the name of the file added to the Restore? Is there a way to make IDL call a useful command instead of the file name?

Thank you,
Pavel
