Subject: digitize a curve from an image
Posted by Kristian Kjaer on Fri, 18 Aug 2000 07:00:00 GMT

I have a gif file (B/W only, no greys or colours) showing a line graph.
Now I would like to get hold of the x,y arrays represented by the curve.
Has anyone written something to do that already?
The coordinate axes are a little skewed in the image (originally
scanned).

Thanks for any help, Kristian
