Subject: Coastal boundaries over sat data
Posted by Daniel Peduzzi on Wed, 16 Aug 2000 07:00:00 GMT

I have some satellite imagery in its native projection (DMSP,
GOES, Meteosat, and GMS) with accompanying latitude/longitude
pairs for each pixel. I'd like to display these images in their
native projections using 0-100% grayshades, but overlayed with
coastal boundaries in some non-grayshade color.

Is this possible using the standard map routines available in
V5.2? I've found plenty of ways to draw boundaries over data
which have been remapped to some other projection, but not in
the raw satellite projection.

Alternatively, does somebody have a routine to do this?
