This was the first thing I had to do when I got a G4. I got a Griffin technology iMate - it is a USB to ADB adaptor. Extension for it is on their web site <http://griffintechology.com>, but I suggest not using the beta one, it caused me to lose the dongle (and all contents of IDL session) several times. But with their official release extension it works like a charm.

After a quick look I found it on the web at MacZone.com for \$40 at

<http://www.zones.com/cgi-bin/zones.exe/zones/scripts/product/product.jsp?srchStyle=RESULTS&productID=18675>

. Maybe you can find it for even less than that.

Hope this helps.

Cheers,

Pavel
