hello

A rather simple question...

It comes out in a direct graphics window (SET_PLOT, 'WIN') though not in a ps file.

Is there something along the lines of the previously noted unicode !Z format code that can be used in this situation? or do i need to change to another font? or did i miss something simple?

also has anyone tried 'Adding Your Own PostScript Fonts' (PSAFM)?

just for clarity {x86 Win32 Windows 5.2}

leon

example code

```
-----  
SET_PLOT, 'PS'  
!P.FONT = 0  
DEVICE, SET_FONT = "Times-Roman"
```

```
DEVICE, FILE='test_out.eps'  
    DEVICE, /ENCAPSUL, /color
```

```
DEVICE, /CLOSE  
-----
```
