Have you ever read Pablo Neruda's The Book of Questions?
Fabulous. Here is an example.

Whom can I ask what I came
to make happen in this world?

Why do I move without wanting to,
why am I not able to sit still?

Why do I go rolling without wheels,
flying without wings or feathers,

and why did I decide to migrate
if my bones live in Chile?

Here is one from The Book of IDL Questions
I hear he is writing.

How many contours will I get if
I let IDL select them?

Who in his right mind thought we needed
something like the Table Widget?

Why is it so difficult to get PostScript output,
and why are object graphics lines so thin?

How hard can it be to write code that is
incomprehensible? Do I need to know more, or less?

Cheers,

David

P.S. Let's just say I'll bet *those* questions take
Craig longer than five minutes to answer. :-)
