I just wanted to share with you all what I learned about using the IDL EOS calls to open and read the HDF-EOS files. I created a tip's page on our website to read a sample MODIS Product HDF-EOS file.

<http://www.cira.colostate.edu/special/csuidl/IDLEOS.htm>

I cannot say which one is better - the HDF_SD routines or IDL's EOS_SW routines. However, it seems to me that the EOS calls are a lot easier. I still need to test them on large datasets like the 250 meter MODIS data.

Any comments about the web page are welcomed.
