```
<!doctype html public "-//w3c//dtd html 4.0 transitional//en">
```

Hi all,

I wrote a recursive function, but something does not work.

The example reported is the skeleton of the function.

<p>In this version:

[illegible]

```
function recFun, var1, var2
```

[illegible]

```
print, var1, var2
```

[illegible]

```
err = recFun($
```

[illegible][illegible][illegible]

```
string(var2)+'Prrrr')
```

[illegible]

```

return, 0

```

[illegible]

end;

[illegible]

```
function recFunTest, var1, var2
```

[illegible]

```
err = recFun($
```

[illegible]

```
string(var1)+'Prrrr', $
```

[illegible]

```
string(var2)+'Prrrr')
```

[illegible]
