I have a demo of IDL an am considering buying it. I currently use
Speakeasy and Mathematica and am very happy with Speakeasy, but not
with support from the Speakeasy company. I want to replace Speakasy
with Mathematica, Matlab, or IDL and was wondering if I could get some
opinions. I want to do number crunching and I hear that IDL is mostly
imaging software. Actually I am very happy with Mathematica, but it
seems to solve the same preoblems as speakasy 100X more slowly on the
same machine. Thanks.
