Hello everybody:

I am trying to overlay the geometry of a computational domain on the contour plot. I am having no trouble in generating the contour plot. I am trying to generate the geometry of domain using PLOTS command. The geometry is very simple and can be generated by drawing a view horizontal nd vertical lines. But when i use PLOTS command to generate geometry, for example,

PLOTS, [0, 0],[.9,.9], i get an error message like this

% PLOTS: Data coordinate system not established.

In other words, I am having trouble establishing the data coordinate system. Can anybody tell me how to establish the data coordinate system in this regard?

thank you

Deb
