Hi,

Can someone explain this behaviour to me please :

Consider this little program :

```
xlist = ftarr(1000)
xlist = findgen(1000)
ylist = ftarr(1000)
ylist = findgen(1000)
index = where (xlist EQ ylist[6])
print, where(ylist LE xlist[index])
END
```

the output is '0' while I was expecting '0 1 2 3 4 5 6' .

What am I doing wrong here ?

Thanks,

Henk
