Hello,

I have written a small test widget program:

There is a CW_BGROUP area with 3 exclusive buttons: A B C

When I select A, i have 'Button A Pressed', and that's OK,

then I select B, I have: 'Button A Pressed' then 'Button B Pressed'.

It seems in fact to repeat the last action before executing the current choice.

Where is the problem ?

Thanks in Advance,
Christophe.

Here is the program:

PRO MAIN13_Event, Event

```
WIDGET_CONTROL,Event.Id,GET_UVALUE=Ev
;print,'EV: ',Ev
CASE Ev OF
```

```
'BGROUP2': BEGIN
  ;print,'Event.Value',Event.Value
  CASE Event.Value OF
    0: Print,'Button A Pressed'
    1: Print,'Button B Pressed'
    2: Print,'Button C Pressed'
    ELSE: Message,'Unknown button pressed'
  ENDCASE
END
```

```
'BUTTON3': BEGIN
  widget_control,event.top,/destroy
END
ENDCASE
END
```

```
; DO NOT REMOVE THIS COMMENT: END MAIN13
; CODE MODIFICATIONS MADE BELOW THIS COMMENT WILL BE LOST.
```

PRO test_wid, GROUP=Group

IF N_ELEMENTS(Group) EQ 0 THEN GROUP=0

junk = { CW_PDMENU_S, flags:0, name:'' }

MAIN13 = WIDGET_BASE(GROUP_LEADER=Group, \$
 ROW=1, \$
 MAP=1, \$
 TITLE='test', \$
 UVALUE='MAIN13')

Btns100 = [\$
 'A', \$
 'B', \$
 'C']

BGROUP2 = CW_BGROU(MAIN13, Btns100, \$
 ROW=1, \$
 EXCLUSIVE=1, \$
 UVALUE='BGROUP2')

BUTTON3 = WIDGET_BUTTON(MAIN13, \$
 UVALUE='BUTTON3', \$
 VALUE='Quitter')

WIDGET_CONTROL, MAIN13, /REALIZE

XMANAGER, 'MAIN13', MAIN13
END
