Subject: TWO DIFFERENT COLOR TABLES IN SAME WINDOW

---

I have opened ONE window, plotted an image in the upper part of the window, and will like to plot a line graph in the lower portion of the same window.

I have found directions on how to use different color tables in different windows which are displayed at the same time. Is there a way to use different color tables on two different plots (e.g. one image, the other a line graph) in the same window?

Thanks in advance.

Mark
