hi,

I tried using the /Landscape keyword to produce a Landscape plot when using the PS device, since the default is portrait. When viewing the resulting .ps file with ghostview, the ghostview window is changed to be landscape rather than portrait, but the plot is totally screwed up. Only about 5% of the image (image is a mixture of Plot and Tv) is in the window, and from what I can see of the image, it appears that it has been rotated through 180 degrees.

Is there anything else I must do other than set /Landscape when using Device?

cheers,
S
