
Subject: Tabs in IDL text-widgets, an update

I put into my program a filter to remove all tabs from the files, and replace them with the appropriate number of spaces, before displaying them in the IDL text widget. This reduced my problem considerably, but didn't make it go away entirely. The problem now seems to be that the IDL text widget uses proportional spacing, so things still don't line up as they do when I'm editing the files to be displayed.
