Assuming you are using ENCAPSULATED PostScript,
LaTeX should have nothing to do with the included
graphic except to put it in place.

Your IDL code looks something like:

```
SET_PLOT, 'PS'            ; PS device
!P.FONT=0                 ; use PostScript font
DEVICE, /ENCAPSULATED, Filename='foo.eps'
PLOT blah blah blah
DEVICE, /CLOSE_file
blah blah blah blah
```

right? And you're not doing anything fancy in
LaTeX like using psfrag, I assume.
