Subject: IDL produced postscript files in latex
Posted by Simon Webster on Tue, 17 Oct 2000 07:00:00 GMT

Hi,

I'm producing postscript files with idl to go in a latex article.
Everything is fine when i just have one plot on the page, but when i
used !p.multi=[0,2,0] latex acted as though the second graph didn't
exist, overwriting the plot with text. Is this a known problem and is
there any way around it?

thanks
simon

(ps David, thanks for the help with the previous query)
