Subject: HDF File Label and Description

I have been working with some ISCCP data in the HDF-SDS format and I am unable to find a HDF routine that gets to the file label and description part of these files. There are some text data located here I want to get to - namely the date of the data. I have no problems getting to the 12 Data Sets in the file.

Any suggestion? Liam's tools and Fanning tools don't appear to see the file label and description information.
