Hi David,

What exactly is it that you can't do with them? Is it idlANroi or idlGRroi that is bothering you?

I have a working example of ROI object in the Display code, check out <http://spot.colorado.edu/~romashki/idl/display.html>

Ignore the compiled binaries on the above URL, use the source code. They are not updated and don't support ROI.

Cheers,

Pavel
