Subject: plotting vectors in 3D
Posted by M Carmen Gonzalez on Fri, 03 Nov 2000 12:05:35 GMT

Dear all,

I am new in IDL programming and I'm still a bit lost, so may be some of you can help me...

I am trying to plot the measured wind speed (2 components) by a balloon in vertical ascension. At each point of the trajectory i want to plot a vector indicating the wind direction at that point.

Does someone know how could I do it?

Thanks a lot,
