University of VA has a copy of IMSL/IDL that is copyrited 1992.
Is this software significantly different from the RSI or pv-wave
versions? We have a grant out which will fund the \$4000 needed
to buy IDL, but we wont have that money for probably a year.Is
it worth using and learning the IMSL/IDL version that we have now?
Will my programs be able to be used with the other versions?
