I'm trying to do some Probit Analysis. I have code that I wrote many, many years ago in Fortran IV (anyone remember that?), but I'd have to rewrite most it into Fortran 77 or C anyway and re-do all the plotting stuff. It'd be much easier to do it in IDL. Before I reinvent the wheel, does anyone have Probit Analysis source code for IDL? I've checked all the available libraries on the Web and cannot find one.

Thanks
