[Stuff deleted]

The mystery is solved, thanks to Thomas Braunbeck, AS Software Service
AIX, Germany.

Compiling and linking the program with the one statement:

```
cc -O -e bug -o bug bug.c -lm
```

removes the problem and IDL's complaints. This should be changed in the
IDL documentation "Using CALL_EXTERNAL and LINKIMAGE on the IBM Risc
System 6000".

```
< example : example.c  
< cc -c example.c  
< ld -e example -o example example.o -lc
```

```
> example : example.c  
> cc -e example -o example example.c
```
