
Subject: PV-WAVE translating program?

Hello all,

I need some help with PV-WAVE. I had been doing a lot of computing with PV-WAVE and saved a lot of data in save files. But, the license for PV-WAVE on the local system expired recently, with no advanced notice given (grrr...). I am looking for some way to recover the saved data. Does anyone know of the existence of some translating program which will decode one of these save files and translate it to an ASCII file? I have no idea if this is possible, but I would like to explore all options. Any other suggestions would also be greatly appreciated.

I have tried restoring one of these files into IDL, which did not work (not surprisingly). That's one possibility exhausted.

Please email replies...

Thanks in advance,
