Hello,

Thanks for testing the program. I did more testing and it does not seem to be related to the screen resolution setting... More about this later. By the way, since it seems that this problem and several others have been fixed in new IDL version, I am gradually coming to the idea of updating (5.2 ->5.4). However, several post in this group concerning stability, new bugs, licensing problems... make me wonder if its really worth the the paperworks I will have to do for this.

Anyone willing to share his/her experience about updating?

cheers
